

Databases Project 2025

Assignment 6

Peter Baumann, Constructor University

Submission: by team, through git repository

Deadline: 2025-oct-30 23:59

Search Component

Implement the queries defined in your earlier assignment, N queries for team size N. For each query, establish the following pages:

- search form (input attributes taken from your query design done earlier)
- search result list displaying elements found (or an error message if necessary).

Each item in the result list must have a link to the detail result page displaying a single item of the result list. Therefore, you need to implement a third type of result pages, namely: presentation of a single result record.

Submission:

- Website, accessible via Web browser in the project's Web directory **and** in git repo
